

Datenblatt | Data sheet 压力变送器 PrimAtü10

通过 PrimAtü 10 压力变送器，根据所选测量范围，可检测并显示正负压差，直至最小压力范围。压力测量通过压阻式硅传感器实现，该传感器将检测到的压差转换为与压力成比例的输出信号。输出选项可选择光学显示的显示屏或数字接口。根据型号不同，变送器可采用 24 VDC/VAC 或 230 VAC 电源供电。显示和通过接口输出的压力单位可在 hPa、Pa、mbar 和 psi 之间选择。压力变送器可通过两个按钮进行校准：一个按钮用于零点校准，另一个用于幅度校准。

应用领域

PrimAtü 10 型压差变送器适用于检测非腐蚀性气体的过压、负压和压差，典型应用包括：暖通空调技术、洁净室技术、微压技术、物位测量、过滤技术、流量测量

Pressure transducer PrimAtü 10 can detect and display differential, both positive and negative pressure variations to lowest pressures, depending on the selected Measurement range. The pressure is measured by means of a piezoresistive silicon sensor, which converts the detected differential pressure into a pressure-proportional output signal. As an output, one can optionally choose between a display for visual indication and a digital interface. The transducer can either be operated with a 24 VDC/VAC or a 230VAC supply voltage, depending on the model.

It is possible to select the pressure unit between hPa, Pa, mbar, psi that is displayed and output via the interface. The pressure transducer can be adjusted using two buttons. A button is used to adjust the zero point, and another to adjust the amplitude.

Applications

PrimAtü 10 differential pressure transducers are suitable for detecting over-, negative and differential pressure variations of non-aggressive gases. The pressure transducer is typically used in the following applications:

Heating, ventilation and air-conditioning technology, Clean room technology, Draft pressure technology, Fill level measurement, Filter technology, Flow measurement.

* 精度描述了传感器输出信号与施加压力值之间的最大允许测量偏差。该精度包括由线性误差、滞后误差和重复性误差引起的测量误差。FSM 的压力变送器经过零点校准和幅度调整，从而补偿了这两种误差¹。因此，规定的精度包括室温下的最大误差。

** 配置不能由用户更改，而只能由 FSM AG 进行更改。

* The accuracy describes the maximum permissible measurement deviation of the sensor output signal from an applied pressure value. The accuracy includes measurement errors due to linearity errors, hysteresis errors and repeatability error. Pressure transducers from FSM are being subjected to a zero point calibration and an amplitude adjustment. Both errors are thereby compensated. The specified accuracy therefore includes the maximum error at room temperature.

** Configuration can not be changed by the user, but only by FSM AG.
